

# Resuscitation Science Symposium

## Case Reports and Images Submission Guidelines

**Submission Deadline Extended to June 8, 2026, at 6:00 p.m. CDT**

Provide clinical cases which highlight a unique or interesting facet of cardiac arrest or resuscitation. This may include rare causes, unusual presentations, unique or atypical management strategies or cases which underscore a specific teaching point very well. In the case of images, these should encapsulate an important aspect of diagnosing or effectively managing cardiac arrest and ideally will lend themselves to future pattern recognition for healthcare providers.

Case Reports and Images Abstracts may have the following identifiable sections: Case Presentation, Differential Diagnosis, Treatment and Management, Outcome and Discussion/Teaching Points

1. Title
2. Case Presentation - Detailed patient information including: demographics, medical history, symptoms and clinical findings, and diagnostic tests/results. **NOTE: Do NOT include patient names. Proprietary information cannot be revealed.**
3. Differential Diagnosis - Discussion of the potential diagnoses considered and the reasoning behind the final diagnosis.
4. Treatment and Management Details of the treatment provided, including any procedures, medications, or interventions.
5. Outcome and Follow-Up - Results of the treatment and the patient's progress over time.
6. Teaching Points - Analysis of the case, comparing it with existing literature, highlighting unique aspects, and discussing implications for clinical practice.

### **Abstract Acceptance**

Accepted case study abstracts will be **poster only and presented in the ReSS26 poster sessions**. Acceptance notifications will be sent out late July/early August.

***Case study abstracts will not be considered for awards.***
