1 - Use of Preregistration and Preprints are encouraged. AHA provides guidance related to their use.
2 - AHA requires applicants to include a data sharing plan/opt-out request with their application. Most early-career awards are exempt from this requirement. AHA will approve or reject opt-out requests based on established guidelines. This plan should be a living document that is updated by the PI as needed throughout the project.
3 - Any factual data (or code) that is needed for independent verification of research results must be made freely and publicly available in an AHA-approved repository as soon as possible, and no later than the time of an associated publication or the end of the funding period (and any no-cost extension), whichever comes first. Most early-career awards are exempt from this requirement. Guidance for Material Transfer is provided.
4 - AHA requires that all journal articles resulting from AHA funding be made freely available in PubMed Central (PMC) and linked to an AHA award within 12 months of publication.
