

# EMBOLISE

## Embolization of the Middle Meningeal Artery with ONYX™ Liquid Embolic System In the Treatment of Subacute and Chronic Subdural HEMatoma: The EMBOLISE Study

**OBJECTIVE:** To investigate the efficacy and safety of embolization of the middle meningeal artery (MMA) using Onyx™ liquid embolic system (LES) in patients with symptomatic subacute or chronic subdural hematoma compared with an observation control group

**STUDY DESIGN:** Multicenter, prospective, randomized, interventional, controlled, open label, investigational device exemption clinical trial, N= 200

**CONCLUSIONS:** MMA embolization with Onyx™ was superior to observation in reducing the risk of surgical rescue or a poor or deteriorated clinical outcome at 90 days.
