Cardiovascular Disease (CVD) (ICD-9 390 to 459, ICD-10 I00 to I99.)
& Coronary Heart Disease (CHD) (ICD-9 410 to 414, 429.2; ICD-10 I20 to I25 (includes MI ICD-10 I21 to I22))

- In 2016, CVD caused 4,313 deaths among non-Hispanic (NH) American Indians or Alaska Natives. CHD resulted in 2,069 deaths and myocardial infarction (MI) caused 606 deaths in this group.

Stroke (ICD-9 430 to 438; ICD-10 I60 to I69)

- In 2016, 632 NH American Indian/Alaska Native, all ages, died from stroke.
- In 2016, the age-adjusted death rates for stroke in NH American Indian or Alaska Native males were 31.2 per 100,000 and 30.1 per 100,000 in females.

High Blood Pressure (HBP) (ICD-9 401 to 404, ICD-10 I10 to I15)

- In 2016, 520 NH American Indian/Alaska Natives (all ages) died from HBP.

Smoking

- In 2016 for age 18 years and older, 31.8% of American Indian/Alaska Natives were current smokers.

Physical Inactivity

- In 2016, only 14.7% of American Indian/Alaska Native adults age 18 and older met the 2008 Federal Physical Activity (PA) Guidelines for both aerobic and strengthening activity.

Diabetes Mellitus (DM) (ICD-9 250; ICD-10 E10 to E14)

- In 2016, the overall age-adjusted death rate attributable to Diabetes Mellitus was 21.0 per 100,000. In 2016, the rate was 52.2 per 100,000 for NH American Indian/Alaska Native males and 40.6 for NH American Indian/Alaska Native females.
- In 2016, 1,078 NH American Indian/Alaska Natives died from DM.
- Based on 2015 data from the Indian Health Service, the age-adjusted prevalence of diagnosed DM among American Indians/Alaska Natives was 14.9% for males and 15.3% for females.
