

AHA Open Science Policy Compliance

Below is a timeline of the two components of our [Open Science Policy](#) (Public Access and Open Data), and how they work in tandem with each other and align with the American Heart Association's strategic goals. The AHA invests heavily in research to accelerate the pace of scientific discovery, encourage innovation, enrich education, and improve the public good. We recognize that scientific investigation advances only through sharing of methods and results, and the value of an investment in research is only maximized through wide use of this information. Open science policies can facilitate increased discoverability and reusability. Detailed step by step instructions for open science compliance can be located [here](#).
